TD: My Nice Lesson Title

Rodrigo SCHWENCKE, schwencke@lyceeperier.fr

Note: 1°) the .md file is strictly the same than the

other theme example. the only difference is the command hereafter. 2°) The auto-numbering of markdown

(sub-)headlines.

First Some code Exemples with Massilia Light Theme

Command to Type

Command to type in Terminal:

md2all -light example.md

Page 2

Command to type in Terminal:

```
md2all -light example.md
```

HTML

```
1
            <div class="box">
2
                <div class="morpion">
3
                    <div class="case">X</div>
4
                    <div class="case">Y</div>
                    <div class="case">Z</div>
6
                    <div class="case">A</div>
                    <div class="case">B</div>
8
                    <div class="case">C</div>
9
                    <div class="case">T</div>
10
                    <div class="case">U</div>
11
                    <div class="case">V</div>
12
```

LateX

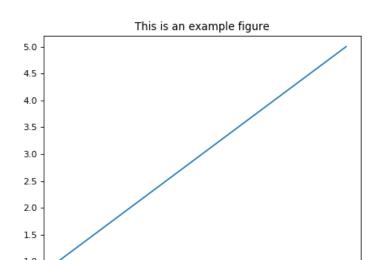

Hey! This is how to insert LaTeX code in your .md File, as a math inline formula $\sqrt{4}=2$, so this line goes on after the other inline formula i^2 , or, as a block code:

$$i_0 = 1; i_1 = 2$$

That's it!

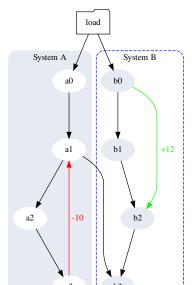

Matplotlib

A Matplotlib rendered Image, with Matplotlib syntax

Graphviz

A Graphviz rendered Image, with the .dot syntax

PlantUML

A plantUML rendered image :

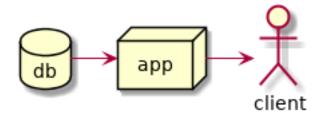

Figure 3: This was generated using the PlantUML filter.
