TD : My Nice Lesson Title

Rodrigo SCHWENCKE, schwencke@lyceeperier.fr

Note: 1°) the .md file is strictly the same than the other theme example. the only difference is the command hereafter. 2°) The auto-numbering of markdown (sub-)headlines.

First Some code Exemples with Massilia Dark Theme

Command to Type

Command to type in Terminal:

```
md2all --dark example.md
```

Command to type in Terminal:

HTML

```html
<body>
    <div class="box">
        <div class="morpion">
            <div class="case">X</div>
            <div class="case">Y</div>
            <div class="case">Z</div>
            <div class="case">A</div>
            <div class="case">B</div>
            <div class="case">C</div>
            <div class="case">T</div>
            <div class="case">U</div>
            <div class="case">V</div>
        </div>
```
Hey! This is how to insert LaTeX code in your .md File, as a math inline formula $\sqrt{4} = 2$, so this line goes on after the other inline formula i^2, or, as a block code:
$$i_0 = 1; i_1 = 2$$

That's it!

A Matplotlib rendered Image, with Matplotlib syntax

This is an example figure

Graphviz

A Graphviz rendered Image, with the .dot syntax
PlantUML

A plantUML rendered image :

Figure 3: This was generated using the PlantUML filter.
